PROFESSIONAL SUMMARY

Frontend Developer with 4 years of experience building production applications with React, Next.js, UmiJS, and TypeScript across enterprise AI, creator platforms, e-commerce, and banking webviews. Currently at DISO, building creator and admin platforms for Techcombank and Vingroup with React, focusing on frontend and contributing Go backend features. Experience includes frontend architecture, shared components, state management, streaming AI interfaces, and performance optimization. Built and run PassInterview (passinterview.app), a Next.js interview preparation platform with 5,000 users.

TECHNICAL SKILLS

Frontend: JavaScript, TypeScript, HTML, CSS, React, Next.js, UmiJS

UI & state: Tailwind CSS, SCSS, Ant Design, shadcn/ui, Bootstrap, Motion, Magic UI, Redux, dva, Zustand, TanStack Query

Web: Responsive design, server-side rendering (SSR), SEO, internationalization, WebView

Backend: Go, Echo, Node.js, Express.js, REST APIs, WebSocket, Socket.IO

Data: MongoDB, PostgreSQL, MySQL, Redis, Supabase

Testing: Jest, Playwright, Go tests, API authorization, integration and regression testing

Design tools: Figma, Subframe

Tools: Git, Docker; Claude Code, Codex, Cursor, MCP integrations and agent workflows

EDUCATION

University of Technology and Education – The University of Danang | Aug 2018 – Dec 2022

Major: Information Technology | Degree classification: Very Good

PROFESSIONAL EXPERIENCE

DISO

Oct 2025 – Present

Full-Stack Developer | diso.vn

Projects: Tfluencer (Techcombank), Gen Green (Vingroup), Ambassador (AccessTrade)

Develop creator platforms, campaign administration tools, and onboarding services across DISO client projects.

- Build creator-facing websites and admin portals across partner projects, maintaining shared React components and partner-specific workflows.
- Develop Tfluencer creator and administration features for campaigns, budgets, events, content moderation, KYC review, reconciliation, data exports, and partner leaderboards.
- Develop Gen Green, a Vingroup KOC platform: bulk content approval, Excel rejection imports, e-contracts, affiliate links, and social account linking.

- Build creator onboarding interfaces with Next.js, shadcn/ui, and TanStack Query for identity verification, bank-card linking, OTP verification, and electronic contracts. Integrate FPT eContract for biometric identity verification and digital contract signing.
- Develop the Ambassador creator app with React 18, UmiJS 4, and Express SSR for tax information, eKYC, bank details, and commissions.
- Implemented Ambassador role and permission management across Go/Echo APIs and the admin UI, including partner-scoped access, permission dependencies, sensitive-data masking, and session revocation when access settings change.
- Develop Go/Echo backend features with MongoDB and Redis. Test API authorization and role-based UI workflows using Jest, Playwright, and local services, and compare regression results with the baseline branch.

Doraverse Apr 2025 – Mar 2026

Frontend Developer

- Built streaming chat and deep-research interfaces for multiple AI models, alongside workspace dashboards for model management, permissions, credits, and Stripe billing.
- Established shared frontend code across administration, authentication, and meeting-note applications. Published a reusable cookie-consent npm package and led code reviews.
- Extended LibreChat interfaces for AI agents, debate, media tools, and notebooks; added multilingual support, responsive layouts, themes, and analytics integrations.

CaSe Group Dec 2022 – Mar 2025

Frontend Developer (with Backend Responsibilities)

Products: Selly (e-commerce platform), Cashbag (cashback webviews in banking apps)

- Developed Cashbag webviews for 15+ banking apps and partner apps, with bank-specific branding, deep links, and Adjust tracking.
- Built Zalo Mini Apps for both Selly and Cashbag.
- Built and maintained Selly e-commerce frontends, administration dashboards, real-time chat, and brand websites; integrated third-party APIs and multilingual interfaces.
- Refactored shared components, optimized frontend performance, reviewed code, and developed backend features with Go and MongoDB.

NCCSoft Sep 2021 – Nov 2021

Full-Stack Developer Intern

- Completed a training project with React, Express.js, and MongoDB.
- Developed features and fixed bugs in production projects.

PROJECT PORTFOLIO

Doraverse – Enterprise AI Workspace

Client: Doraverse | Team size: 10 | Role: Frontend Developer

AI workspace built on LibreChat with multi-model chat, AI agents, image and video tools, notebooks, AI debate, meeting notes, and admin features.

- Set up the frontend architecture for the workspace admin, authentication, and meeting-note apps.
- Built charts with Recharts and frontend pages for model settings, credits, permissions, Stripe billing, and workspace branding.
- Used Zustand for client state and TanStack Query for API data. Connected the frontend to streaming and real-time updates with Socket.IO.
- Built chat and deep-research UI for multiple AI models, including loading states, streaming responses, and tool-call results.
- Improved SEO, optimized frontend bundles, refactored components, and maintained shared UI packages.

Frontend technologies: Next.js 15, React 19, TypeScript, Tailwind CSS, shadcn/ui, Zustand, TanStack Query, Recharts, Socket.IO client

Ambassador – Multi-Partner Creator Platform

Company: DISO (diso.vn) | Client: AccessTrade | Role: Full-Stack Developer

Creator and affiliate marketing platform with a shared admin system and branded websites for banking and business partners.

- Implemented RBAC across the backend and admin UI. Added role and permission settings, required-permission rules, and permission checks for forms, menus, and actions.
- Added API checks for partner-level access and masked sensitive creator data. Restricted which roles and partner scopes staff can assign to other staff.
- Build creator websites and admin portals with React, UmiJS, and TypeScript. Develop a React 18 and UmiJS 4 creator app with Express SSR for tax details, eKYC, bank details, and commissions.
- Implemented Go/Echo APIs with MongoDB and Redis, staff-scope migration through an API, and session permission snapshots with revocation when access settings change.
- Tested API authorization, partner-level data access, and role-based UI flows against a local backend with MongoDB replica sets and Redis. Compared regression results with the baseline branch.

Tech stack: React 16/18, UmiJS 3/4, TypeScript, Ant Design, Tailwind CSS, Express, Go, Echo, MongoDB, Redis, Jest, Playwright

Selly.vn – E-Commerce Platform

Client: Selly | Team size: 10 | Role: Frontend Developer (with Backend Responsibilities)

E-commerce system with a storefront, seller portal, merchant dashboard, admin panel, mobile webview, and Zalo Mini App.

- Built and maintained six frontend apps for customers, sellers, merchants, administrators, mobile users, and Zalo users.
- Developed product catalogs, checkout, order tracking, inventory management, campaigns, and affiliate features.
- Built real-time chat with Socket.IO for customer support and merchant communication.
- Added mobile webviews, deep links, Adjust tracking, and integrations with Firebase, Facebook, Telegram, Google, and TikTok.
- Added multilingual support, dark mode, and responsive layouts. Developed backend features with Go, Echo, and MongoDB.
- Worked with backend developers and designers, reviewed code, and fixed bugs.

Technologies used: React, UmiJS, TypeScript, Bootstrap, Ant Design, Dva.js, Socket.IO client, Go, Echo, MongoDB, Firebase

Webview Mini Games

Clients: CaSe Group and banking partners | Team size: 6 | Role: Frontend Developer

Reward-based games inside banking and game apps.

- Built spin-wheel, gift-opening, and scratch-card games with Tet, Christmas, and Mid-Autumn themes.
- Built admin tools for game settings, reward management, and campaign analytics. Used Zustand for client state and TanStack Query for API queries and mutations.
- Worked with backend developers and designers to improve game performance in host apps.

Frontend technologies: Next.js, React, TypeScript, Tailwind CSS, shadcn/ui, Zustand, TanStack Query

Bio Link

Aug 2024 – Sep 2024

Client: CaSe Group | Team size: 5 | Role: Frontend Developer (with Backend Responsibilities)

Personal profile pages with templates for social links, images, articles, and products.

- Built and maintained frontend code, added user and admin features, and fixed bugs.
- Improved performance, reduced bundle size, and refactored code.

Tech stack: Next.js, React, TypeScript, Tailwind CSS, shadcn/ui, Go, Echo, MongoDB

Cashbag – Banking Cashback Platform

Client: Cashbag | Team size: 6 | Role: Frontend Developer

Cashback platform for 15+ banking apps, including TPBank, MBBank, BIDV, and VPBank, with rewards, vouchers, and withdrawals.

- Developed webviews with branding for each bank and Firebase analytics.
- Built spin-wheel games, leaderboards, and seasonal reward campaigns.
- Built admin and CRM dashboards for campaign management, financial reports, and transaction audits.
- Added voucher management, withdrawals, and transaction history.

Frontend technologies: React, UmiJS, TypeScript, Ant Design, Dva.js, Firebase Analytics

Selly Customer Support Chat

Feb 2023 – May 2023

Client: Selly suppliers | Team size: 5 | Role: Developer

Real-time customer support chat for shopping questions.

- Built the frontend and customer support chat features with Socket.IO.

Tech stack: React, UmiJS, Ant Design, Bootstrap, Socket.IO

Cashbag & Selly Zalo Mini Apps

Dec 2022 – Jan 2023

Client: Cashbag & Selly | Team size: 3 | Role: Frontend Developer

Cashback and e-commerce apps on the Zalo platform.

- Set up the app structure and worked with backend developers on API integration and data flow.
- Built the UI from Figma designs, deployed the apps, and configured Zalo integration.

Frontend technologies: UmiJS, TypeScript

Additional E-Commerce Projects – Mamori.vn & Shop Selly

Role: Frontend Developer | Mamori.vn: Jul 2022, team of 1 | Shop Selly: team of 4

- **Mamori.vn:** Built a product website for a Selly sub-brand from design specifications. Added order processing and report notifications through a Telegram bot.
- **Shop Selly:** Developed e-commerce storefront features for Selly.vn Pro subscribers, maintained website functionality, and resolved bugs.

Frontend technologies: React, UmiJS, Tailwind CSS, Bootstrap

PERSONAL PROJECTS

PassInterview (formerly Luyen Phong Van)

2026 – Present

Role: Full-Stack Developer | passinterview.app

Bilingual IT interview preparation platform serving 5,000 users, with 4,300+ questions and answers, flashcards, AI features, and subscription payments.

- Build the public app with Next.js, React, TypeScript, Tailwind CSS, and Neon PostgreSQL. Configure deployment to Cloudflare Workers with OpenNext.
- Build FSRS spaced-repetition flashcards with progress sync across devices. Add five step-by-step DSA visualizers for sliding window, two pointers, binary search, BFS, and DFS.
- Build AI CV analysis with job-description input and a streaming interview preparation assistant with saved chat history.
- Integrate Google and GitHub OAuth, SePay VietQR, Polar card payments, subscription access control, and transactional email with Resend.
- Build a Next.js admin dashboard with Drizzle ORM for users, orders, discounts, content moderation, and GA4 analytics.
- Develop an AI voice mock interview feature with Soniox speech recognition and speech synthesis, with Edge TTS as a fallback. This feature is not yet publicly launched.

Tech stack: Next.js 16, React 19, TypeScript, Tailwind CSS 4, Neon PostgreSQL, Auth.js / NextAuth v5, Drizzle ORM, SePay, Polar, Resend, Soniox, Motion, Cloudflare Workers, OpenNext

Anfield Daily 2026

Role: Full-Stack Developer | anfielddaily.com

Independent Liverpool fan website with football news, AI daily summaries, match information, and community features.

- Build the app with Next.js App Router, React, TypeScript, and Supabase. Configure deployment to Cloudflare Workers with OpenNext.
- Build an RSS pipeline to collect articles from multiple sources, extract content, and remove duplicates. Generate AI daily summaries and save them to the database.
- Build match pages with fixtures, events, lineups, statistics, and ESPN data.
- Add score predictions and player ratings for signed-in users and save the data to Supabase.
- Build AI-assisted match reviews and multilingual content with next-intl.

Tech stack: Next.js 16, React 19, TypeScript, Tailwind CSS 4, Supabase, TanStack Query, Zustand, next-intl, AI SDK, Cloudinary, Cloudflare Workers, OpenNext
